Here are our updates for October. Our release webinar for Q4 2021 will be announced in the next release. Have a great weekend!

The Inspera Team

---

## Edit 15/10/2021

### Changes to support for Inspera Exam Portal (IEP)

- We will continue support for 1.11 versions until the December Release.
  - Additionally, the rollout of version 1.13 will be postponed for an estimated few weeks. More details will follow in the November Release Notes.
  - **Note:** Version 1.13 requires macOS 10.14 or higher.
- 

## Heads up

### Updates for Inspera Exam Portal (IEP)

For customers using the Inspera Exam Portal (IEP), we have released an upgraded version of IEP (1.13.x) during September. This version will improve stability and security:

- Added detection/reloading if Test Player is not loaded due to connectivity issues
- Fixed recording bugs to improve stability
- Added connection quality check on the system page
- Harnessed Virtual Machine detection on the system page
- Option for low light and break events to not terminate the session but set the confidence level to zero for the session. They will also be visible as events in the event list. (Tenant setting)
- Logging Device Security Flag and Warning if test takers switch accounts on applied moderate security policy on Windows

**We are upgrading all existing customers to the latest version within the first week of October.** You will receive the new version through your customer contact. *Please note: 1.11.x versions will no longer be supported post 1st November.*

### **LTI integration**

The following configuration implementation is being moved to the November release instead of October to ensure we have time for sufficient quality assurance:

- Scheduled task to automatically provision/unprovision users from LMS to Inspera assessment exams.

---

## **Coming soon**

### **Similarity scores in Marking 2.0**

We are working on displaying Similarity scores on the candidate overview page in Marking 2.0.

For more planned features, visit the [Inspera Roadmap 2021](#)

---

## **New features in this release**

### **Increased test duration time**

Users can now set the test duration time on tests within the Deliver module from 8 to 48 hours, allowing Planners more flexibility. Previously, only up to 8 hours was

possible. [Learn more](#)

## Support for languages in audio and image alternatives in MCQ and MRQ

We have added support for alternating between different languages within the audio and image alternatives for Multiple Choice and Multiple Response questions. This is planned to be activated for all by the November sprint. If you would like to activate this now, please contact the Service Desk.

## Content ID and Revision ID available in lists

Revision ID and Content (item) ID columns can be displayed in the Questions or Question Sets page. These IDs are used in some integrations and enable users to easily verify the IDs in the user interface. Content ID can also be useful for customers wanting to use an Inspera generated ID as a unique content identifier. This feature requires activation, please contact the Service Desk to activate.

The screenshot shows the 'Question Sets' interface. At the top, there is a search bar and a 'Create New' button. Below the search bar, there are filters for 'Created by me', 'Edited today', and 'Shared with me'. The main table has columns for 'Title', 'Created by', 'Last edited', 'Edited by', 'Created', 'Content ID', and 'Revision ID'. The 'Content ID' and 'Revision ID' columns are highlighted with a pink box. The table contains two rows of data.

<input type="checkbox"/>	Title	Created by	Last edited	Edited by	Created	Content ID	Revision ID
<input type="checkbox"/>	New Question Set	Henriette Godal	28.09.2021 3:23 PM	Henriette Godal	28.09.2021 3:23 PM	92930322	92930323
<input type="checkbox"/>	smoke test april	Jarle Presttun	14.04.2021 4:17 PM	Jarle Presttun	01.03.2021 11:06 AM	77191019	79867748

## InspiraScan

We have a new version of InspiraScan (v3.2.1) available. Customers who wish to upgrade can contact the Service Desk. The newest version has a couple of minor improvements:

- We have solved the issue related to customers with an expiration date of longer than a year encountering a message saying that their license has expired.
- The installation files are now digitally signed with our software certificate to avoid the Windows warning about unknown software editors.

## MathJax 3 now available for all

We have now upgraded our service for displaying mathematical notations in the player and PDF as we experienced some issues with generating PDFs containing mathematical notations. Upgrading to version MathJax 3 helps fix this and also makes rendering mathematical notations in the test player quicker.

# Other improvements and bug fixes

## Grade

- Styling improvements for displaying bands and criteria in the Student Report.  
[Learn more](#)
- Accessibility improvements to allow for keyboard navigation in the Grade dropdown and options menu.

## LTI integration improvements

The following features have been released:

- Contributor provisioning and unprovisioning from LMS using LTI Membership service.
- Implementation of authentication and template configuration as LTI custom attributes. This feature supports using multiple templates to create exams from LMS/VLE.
- New custom attribute *"lti\_candidate\_extratime"* to add extra time for all students on the test.
  - **Note:** This feature will not work on Moodle through membership service, as Moodle is not supporting IMS global standard for sending membership information. For Moodle tests, extra time will only be added to a student when the student clicks on the test link in LMS/VLE.

## Ladok integration improvements

- Front end improvements
  - Removed manual sync button for creating tests from Ladok.
  - Removed extra fields on the test that are not in use for this integration.

## TurnItIn similarity check integration

- Implemented passing file name in the upload request to support Authorship service.

---

## For developers

The following has been fixed in this release:

- Fixed a bug where the “building” field was not updated in Monitor if the test was updated/created using APIs.
