### Heads Up

## Scheduled changes in SEB version support

**From 3rd July 2020:**

- Supporting SEB 3.0 for Windows

**From 7th August 2020:**

- Ending support for SEB 2.3 for Windows
- Ending support for SEB in MacOS 10.12

From 7th August 2020, the supported SEB versions will be:

- Mac: SEB 2.1.4
- Windows: SEB 2.4 and SEB 3.0

## Scheduled changes in Help Center

From 3rd July 2020:

- Restricting option to submit requests to pre-registered users only
- New users can be registered by submitting service requests

## Inspira SEB and Inspira Remote Exam

We are continuously working to improve the user experience for learners using lock-down browser. The most important change in Inspira SEB 1.0 is that candidates now can start their test taking directly from Inspira SEB, without having to login to a browser first. Our plan is having all our customers using *closed-book exams* transitioning to Inspira SEB. Currently Single Sign On is not supported, but we are working on adding that over the summer.

## Inspira Remote Exam

Institutions with **Inspira Remote Exam** enabled (additional subscription), get additional test security configuration to enable logging of blocked processes in Monitor, recording of audio, video and screen during the entire test session, as well alerting if there is any suspicious behaviour in Monitor. Some of the benefits of our integrated remote proctoring service are that the test session recording will continue if internet connection is lost and there will be no interruption in test taking experience. Invigilators will also see all alerts from Inspira Remote Exam service together with test session status in Monitor.

Please contact Service Desk if you are interested in testing Inspira SEB / Remote Exam.

**Released 5th June 2020**

## New option to expand input fields automatically

*Text entry and Numeric entry*

Authors now have the option to make input fields automatically expand for responses that are longer than the predefined field width.

## Grading and Marking 2.0

### Important notice

Due to feedback received on the scheduled change "*For explanation of grades in External tests we now only allow sending explanation after grade has been transferred*", this has not be released. Although the functional development is completed, we will take further actions to make this change optional per account.

### More logical behaviour of column *Final grade* when reopening grading

In both marking tools, the field *Final grade* contains *confirmed* grades only, and is automatically populated with grades upon confirmation. But, until this release, if a Planner reopened grading, the grades listed in this column would not always be cleared, as one would expect. This lead to unnecessary confusion and has now been fixed.

Please note that **no given grades are cleared** as such. It is only the column *Final grade* that is emptied, since while grading is unconfirmed, *Final grades* do not yet exist.

## Expanded support for individual confirmations in Marking 2.0

In both marking tools, results can be confirmed individually per candidate.

In Marking 2.0, **Graders** will now see a more prominent action in candidate list for proceeding to next step in the marking workflow. It is now also possible to roll back to previous workflow states by *Unsharing* and *Unconfirming* individual candidates.

All candidates ▾ Grade not set +

Flagged	ID ▲	Your grade	Grades	Workflow status	Final grade	Explanation status	
🔖	0001	F - Set manually ▾	F / F	To confirm 2	-	Not started	Confirm
🔖	0002	Leave empty ▾	E / -	Pending all to share 2	-	Not started	Share
🔖	0003	Leave empty ▾	D / -	Private 2	-	Not started	Share

**Planners** now also have the ability to manage the individual marking workflow **on behalf of graders**:

- Skip private mode
- Unshare (Back to private mode)
- Confirm
- Reopen marking

## Other improvements

- FS: Added new field for Vurderingskombinasjonskode
- Author: Fixed issue with design settings for candidate text highlighting having no effect
- Author: Fixed issue with text in bullet lists not visible to authors in secondary language versions
- Author / PDF Panels: Fixed issue with preview showing primary language version of PDF only
- Monitor: Fixed issue with CSV export not including blocked processes
- Monitor / Log: Messages sent to candidates from Monitor are now logged and available as part of the event entry
- Grading: Fixed issue with incorrect count of explanation requests in Overview header
- ChromeOS - Inspira Kiosk App: Fixed issue with submission button labels
