The Inspera Team

Released 6th March 2020

New features

- **Predefined feedback per question** - This is an extension to the existing predefined feedback per alternative. Predefined feedback per question will be activated on all accounts that have previously activated predefined feedback for each alternative. The feature will require activation on other accounts. [Documentation is available in the Help Center](#).

Other improvements

- **Monitor** - Separate columns for whether explanation has been requested, and for status of explanation (Draft, Ready, Sent, Read).
  The existing documentation for [administration of explanations](#) will be updated with these changes.

- **Planner** - "Results page" option can be enabled/disabled after the test has started and before the first student has submitted.

- **Oral exams** - We now offer the options for graders to add an external link to the candidate. This could be to a video hosted on an external website, to Google Drive, or other cloud based services that allow direct linking. [Read the documentation here](#).

- **Appeals with FS integration** - Fixed issue with new candidates added to already confirmed appeals committees. Grader workflow will now be automatically changed to confirm by candidate when a new appeals candidate is added to a confirmed committee.

- **Essay question type** - Support for displaying word count to candidates on Essay question type also if Use plain text is selected.

- **Inline and Graphic Gap Match question types** - Authors can now choose to display tokens to the right of the interaction.
